

Deer Tracks

Deer have hooves. When they walk, they leave behind footprints that look like pointy hearts. Try your hand at making your own deer tracks.

- 1- Have an adult cut two wedges out of the apple.
- 2- Put some paint on the paper plate and dip one side of your apple slices in the paint.
- 3- On paper, arrange the apple slices, paint side down, with the flat edges facing towards each other, and repeat across the page.
- 4- Using a marker or crayon, write some fun facts that you know about deer on the paper.
- 5- Eat the rest of your apple as a healthy snack!

Quiet Little Fawn Game:

When fawns are born in the spring, the mother deer (or doe), often leaves them for long periods of time while she forages for food. To keep safe from predators, the fawn will sit as still and quiet as possible in the spot their mother leaves them.

Challenge your little ones to act like a deer and sit as still as possible. The one who goes the longest without a case of the wiggles and giggles is the winner.
